

Scallops are historically abundant between the following points: Bird Rack (GPS: N28 47.015, W82 47.858) and Chassahowitzka Point (GPS: N28 42.489, W82 43.133). Navigate the Gomez Rocks shallows cautiously (GPS: N28 52.235, W82 45.328).

Most successful recreational scalloping in Citrus County occurs on and around the grass beds between the Crystal and Homosassa rivers.

CLEANING YOUR SHELLS

- Be courteous of other scallopers and move your boat away from the scalloping areas first, then anchor. It's no fun scalloping where others are cleaning their catch.
- When finished cleaning on shore, dump the shells and guts in any deep water away from shore so no one steps on them. OUCH! Be sure the deep water is NOT a channel. Shells could begin to fill the channel and have negative impacts on surrounding waters.
- Want to keep shells to use for crafts or garden cover? Try placing the shells in a net bag and putting them back into the water. Small fish and crabs will be happy to clean the shells.
